Ownership privileges of white women set an example which Havasupai women appear to envy. In addition, modifications in Havasupai political and social structure with consequent economic adaptations point away from any increased emphasis upon patrilineal inheritance, and therefore, toward increased emphasis upon property ownership and land inheritance rights for women. 423 428 562 578 177

Arts and Crafts

Basket weaving is almost the sole outlet for creative artistic talent among the women. Interest in it has so fallen off that, in 1950, only half a dozen women were actively occupied in making baskets despite the fact that their supply never equals tourist demand. It was said that the work of a few other women who had tried basket weaving at one time or another was too inferior in quality for sale. Most of the older women are able to make twined baskets for their own use, but they seldom do. Apparently no one has twined a burden basket for some years, and only three examples of this type were observed about the village. The only other basket type seen in use was a broad, shallow tray convenient for winnowing seeds, parching corn, pinyon nuts, or seeds, and for drying peaches, figs, or other fruit. 285 463

Spier (1928, 126-7) identifies two coiled baskets, one a flattened globular form used for stone boiling and the other a tray used for winnowing or parching. An informant at the present time reports that a shallow bowl from which a family took its meals was also made by coiling. Presumably, all other basketry forms were produced by the twining technique. 285

Today the few utilitarian baskets woven are twined, while those made for sale to tourists are nearly all coiled.

Although women traditionally traded baskets to the Hopi, Navaho, and Paiute, demand lessened as metal containers became available. Basket weaving for home use declined, although the Havasupai continued to make certain types, including burden baskets and trays, which were not duplicated in metal form. [439] [177]

The advent of tourists to Grand Canyon National Park for a time stimulated interest in basket manufacture, but emphasis gradually changed from utility baskets in twined stitch to coiled ornamental basketry in a variety of new shapes and sizes. Coiling was the weave preferred by tourists.

Formerly, emphasis was upon utility rather than upon artistic effect or originality of decoration. Baskets were sturdy and durable. Weavers in general kept to basic styles, although the variety of shape in water bottles suggests some inventiveness beyond requirements of utility. Spier (1928, 124) reports four striking different shapes of water bottles, although three are variants of a single fundamental form.
